

Artificial Intelligence (AI)

- Artificial intelligence tools are technologies that use machine learning to perform tasks that typically require human intelligence, such as understanding language, generating content, or making decisions. AI assistants and chatbots like ChatGPT, Claude, Gemini, DeepSeek, and Grok are designed to interact with users through natural conversation, helping with writing, research, coding, and everyday tasks. These tools are part of a wider AI ecosystem that also includes apps for creating videos (Synthesia), images (Midjourney), managing projects (ClickUp), generating music (Suno), etc.
